

NCL to deploy nation's first indigenously developed electric dump truck

The CMD NCL Shri.P.K.Sinha and CMD BEML Shri Deepak Kumar Hota jointly flagged off nation's first indigenously developed electric Dump Truck on Monday at inaugural ceremony held in Mysore. The Director (Technical/Operations) NCL Shri Gunadhar Pandey also graced the flagging-off ceremony. On this occasion General Manager (Excavation) NCL Shri.S.C.Vats was also present.

Keeping in with the 'Make in India' initiative of the Government of India, NCL will deploy the home grown Dump Truck for its mining operations.

In a first, BEML has developed 205 Tonne Electric Dump Truck (Model BH205-E) indigenously. The dump truck, which had been flagged off for its use in NCL, has numerous safety and eco-friendly features. The dump truck is designed and developed using electric drive systems which significantly lowers oil consumption over its life cycle thereby reducing the overall environmental impact. Other salient features of the dump truck include emphasis on operator's comfort, ergonomically designed dash board, emergency steering & braking and proximity warning thereby contributing massively towards safety.
